

## Instructional Technology Advisory Committee (ITAC) Major Initiative and Action Items for 2016-17

One of the goals contained in the university's Strategic Information Technology Plan for 2016-17 is:

*Optimize the use of technology in teaching and learning in collaboration with academic leadership, including understanding the appropriate level of technology to utilize.*

In support of this goal, IT Council has assigned the Instructional Technology Advisory Committee (ITAC) a major initiative to expand and enhance the capabilities of the university's technology-enhanced classrooms and related support services.

This major initiative contains the following action items

- 1) Conduct a review of all technology-enhanced classrooms and associated technology levels to determine if current standards need modified.
- 2) Based on the success of the Classroom High-Density Wireless Pilot Project, begin upgrading wireless access to support increased density needs in technology-enhanced classrooms.
- 3) Ensure the university's resource scheduling system contains accurate information concerning instructional technology assets.
- 4) Identify lifecycle-funding issues and develop a plan to address predicted shortcomings.
